Kayaks from an ecological point of view:

All polyethylene-kayaks consist mostly of fossil oil and are produced with a high energy input. Transport takes place up to 95% on the roof of cars. So, kayaking per say is a un-eco activity.

We calculated the amount of energy needed for the production of our HTP-kayaks. The accruing energy costs, from the production of the raw hull, over the production and mounting of the detachable parts up to the average energy costs for the delivery of the components and the shipping of the finished kayaks to the shops, total in approx. 500 KWh.

Hereby it becomes clear, that a long useful life of the product is the crucial factor for the balance of energy. During the planning process of the kayaks and detachable parts we already focus on their longevity. Our material HTP is the key advantage, its longevity is incomparable. During the production of the hull no waste accumulates. Worn-out hulls are taken back by us and recycled.

Further factors for a positive energy balance are:

We produce at the point where the market is.

Our HTP kayaks are made in Rosenheim. This ensures short distances to our shops.

Short delivery distances of our suppliers.

More than 80% of our detachable parts come from suppliers, located within a radius of about 300 km from the head quarters in Rosenheim. This results in low energy costs for the delivery and an increase in the country's value chain.

In-house generation of energy.

The process heat of the production of the hulls is used for the heating of the production hall. Another amount of our needed energy is covered by our photovoltaic system.

We have seen with our own eyes that most of the textiles used in the kayak industry are made in Far East. This causes very high transport-energy-costs for their delivery.

Our "women workers" in our in-house sewing room make all of our sewed parts. By doing so, we save costs and energy for the delivery, maintain important jobs and can guarantee the fulfillment of your high quality requirements.

This is why we allocate all our products, which are produced energy-economically, the green moons.
We have divided our touring and seakayaks into 3 categories, in order to make the selection process easier.

1. **Kayaks for beginners and occasional paddlers**
2. **All-round touring boats for rivers and lakes**
3. **Fast single kayaks for lakes, coast and the sea**

The division is mainly made according to boat shape and purpose.

Regarding boat shape you can simplify:

**long + slim = wobbly + fast**

**short + wide = stable + slow**

Further distinctions can be made regarding the equipment of the kayak. If you are looking for a kayak for tours with luggage, then all-round touring boats or fast single kayaks are better suited, as they have certain standards of equipment, like water-tight storage and perfectly adjustable seating position.

**But a basic rule is: Test first, then buy!**

You will find a list of expos and testing events supported by us at [www.prijon.com](http://www.prijon.com).

---

**Fast single kayaks**

These boats are comparatively slim and long, which provides them with a high base speed and good tracking qualities. Ideal for sporty and ambitious paddlers and faster tours.

*You find the fast single kayaks from page 8...*

---

**Allrounders**

This category is ideal for a vast range of terrains, from rivers to coastal waters in calm conditions. Here you will find well-tried allrounders for luggage tours, for example the Touryak, agile kayaks for fast-moving rivers, like the new ENDURO 450 and various two-seaters. These boats have been constructed a bit shorter and broader to provide a higher level of base stability.

*You will find the allrounders from page 16...*

---

**Boats for beginners**

These kayaks are very similar to the allrounders with regard to boat shape. They have good tracking and are good to maneuver. The essential difference is the technical equipment of the boats. There are fewer waterproof storages and the seating is also simpler. Therefore these boats are very well suited for short tours without a lot of luggage or for kayak rental.

*You can find these kayaks from page 26...*
Seekayaks
**Marlin PriLite LV**

Smaller version of our Marlin PriLite, made of approved ABS-material. Elegant, fast and handy. For low- and middle-weight paddlers. The equipment is comfortable and works also for long-distances.

**Dimensions:**
- Length: 513 cm
- Width: 58 cm
- Weight: 22 kg
- Maximum load: 115 kg

**Made in Europe**

---

**Marlin LV Laminate**

**Materials:**
- GRP
- CARBON-ARAMIDE

**Dimensions:**
- Length: 507 cm
- Width: 57 cm
- Weight: 17.5 kg
- Maximum load: 115 kg

**Made in Italy**

---

**Marlin PriLite**

Its elegant, stretched lines make it an ideal boat for travelling. Safe forward gliding, fast changes in direction using the edges of the boat, everything can be done in a safe and precise manner. Flat angles on the lateral areas make the boat very manageable and provide an optimum of stability.

PriLite is a thermic deep-drawn, resistant ABS-material. Solid, light and easy to repair.

**Dimensions:**
- Length: 530 cm
- Width: 58 cm
- Weight: 23 kg
- Maximum load: 140 kg

**Made in Europe**

---

**SkegYak**

A Revolution: The first Prijon HTP sea kayak with Skeg! A classic but modern British shaped sea kayak with a heavy rocker, perfect for surfing in waves. It tracks well with the help of the Skeg - for tracking in all wind directions, but is very maneuverable when drawn up making it incredible fun to paddle. Also usable as a Touring-kayak.

Two bulkheads, a day-hatch and several deck-lines and mounting possibilities emphasize its touring suitability. The SKEG is flush with the hull with a stainless steel frame. Therefore it is easily replaceable in case of loss.

**Dimensions:**
- Length: 509 cm
- Width: 56 cm
- Weight: 29 kg
- Maximum load: 130 kg

**Made in Germany**

---

**The SkegYak comes with the SeaDog-footrest as a standard.**

---

**The new seat-system with 3D thigh braces, based on our whitewater seats, offers optimum contact and control, also in high waves.**
**Seayak 520 HV**

Sporty and safe SeaTourer for medium to higher weight. It works best on long tours across open waters with a lot of luggage. The sloped lateral surface of the lower boat provides it with a reliable secondary stability. Swimming flat on the water the 520 HV possesses a high tracking quality, while it’s easy to maneuver along bends via its lateral edges. Equipped with our new 3D-thigh braces.

**Seayak 500 LV**

Sporty and fast kayak for smaller and lighter paddlers. Main characteristics are the slim and sporty shape, low overall volume as well as a cockpit with an optimum seating position for smaller paddlers. Marked lines on the lower boat, derived from our knickspant, provide the 500 LV with good tracking qualities as well as good agility on the lateral edges. Equipped with our new 3D-thigh braces.

**Seayak Classic**

The SEAYAK Classic is an agile all-rounder for rivers and open waters. Offering high stability and controllability with a classic hull. The kayak has very comfortable paddling qualities with enough storage for extensive tours.

---

**Seayak Names**

The names SEAYAK and KODIAK have been a synonym for fast, attractive kayaks with safe and manageable riding qualities for many years. Three different SEAYAK-shapes and the KODIAK offer the perfect fitting boat for every paddler for larger rivers, lakes or tours along the coast.

SEAYAK and KODIAK are also available as lighter ACTIVE-versions with reduced equipment at a favorable price.
This beautiful kayak is a combination of a fast sea kayak and an agile touring-kayak. The long, slim form provides a high level of speed. The pronounced knickspant on the lower hull offers a comparably high agility, so that you will also be able to use the MILLENIUM EVO on rivers and lakes.

The PROTEUS is made for long and fast tours on open waters and along the coast. Pronounced keel-sections in the front and rear result in a long water line and consequently in a high cruising speed. A safe position in the water and a balanced relation between directional stability and maneuverability makes you feel superior anytime.

The BARRACUDA RS is a very fast kayak for sporty and ambitious paddlers. Made for racing marathons and long-distance competitions, trainings in the evening and longer tours with a small amount of luggage. Due to its slim form, minimum rocker combined with a pronounced V-spant, the BARRACUDA RS is the roadster among the Prijon kayaks. Take your time to get used to the BARRACUDA RS and you will have a great time!
Schmalensee near Mittenwald.
Michael Neumann
Enduro Series

Universal weapon with cargo-licence

The Enduro manages the whole course of a river, from the headwaters in the mountains to the estuary mouth. A kayak being able to manage changing conditions on such a course, must combine seemingly contradictory characteristics. Agile enough for the swift-flowing, curvy headwaters, on the other hand not too sluggish on standing water. Enough storage for a multi-day-trip with a complete equipment is also included.

The ENDURO is the perfect synthesis of Tornado, Touryak and the time-honored Yukon Expedition. No Prjion kayak is more universally usable. Hans Memminger would be excited.

Abstract of the KanuMagazin 02/2016, from Norbert Erdmann.

Enduro 380

The ENDURO 380 is shorter than its big brother and has a heavier rocker. The compact measurements make him more agile and fast-reacting. Rivers and easy whitewater up to class 2 are his terrain. Large bulkheads and a comfortable seat-system with whitewater-suitable thigh-braces make multi-day trips with a lot of fun possible.

Matching paddles and PFDs starting from page 34.

The ergonomically optimized new TOUR-seat-system with backrest and comfortable 3D-thigh-braces provides a lot of comfort and footing, for longer distances and whitewater. Equipped with two waterproof bulkheads, a deckbox and luggage straps on the deck, as well as a steering mounting, you can immediately start the journey from the river to the coast.

The Touryaks are excellent touring-kayaks for rivers, lakes and the calm coast. Equipped for luggage-tours.

Touryak 470

The smaller brother of the TOURYAK 500 is the optimum touring kayak for smaller and lighter paddlers. Deck height, width and volume have been adapted to fit the needs of smaller paddlers. A perfectly formed lower boat provides good tracking as well as a high level of agility via the edges.

Touryak 500

Large, spacious and safe. The modern lower boat with the sloped lateral surfaces offers a high level of initial and secondary stability, whilst running easily. The spacious cockpit with our new 3D-thigh braces allows even larger paddlers to maintain a comfortable seating position over longer periods of time. Large storage compartments and ample equipment.

Touryak Series

The Touryaks are excellent touring-kayaks for rivers, lakes and the calm coast. Equipped for luggage-tours.
Dayliner Series

Dayliner Light

Compact, stable and lightweight allrounder. The cockpit has been extended to almost 100 cm to facilitate entry and exit, especially for less mobile paddlers. The light weight makes the handling of the DAYLINER LIGHT easier, especially when loading or during transport.

Dayliner S

A short, light, single tourer for tours on lakes and rivers. Smaller, lighter paddlers will instantly feel comfortable in this kayak. Made for beginners, looking for an uncomplicated paddling enjoyment.

Dayliner L

The L version was designed for larger paddlers. Ideal for beginners looking for uncomplicated paddling fun. Equipped with basic features like watertight storage spaces.

Dayliner Series

Compact measurements, light weight as well as a good price-performance-ratio are characteristics of the DAYLINER Series, which by now has acquired a large fan base.

Kayaks of the DAYLINER Series are equipped with two watertight separations and a comfortable seating system.

The simple deck equipment saves weight and enables us to offer you a favorable price.

**Alborea**

The ALBOREA weighs only 15.5 kg in carbon/aramide at a length of 422 cm. Therefore loading on the car roof as well as the transport to the water is very easy.

**Laguna**

Good tracking on open waters, agile on smaller rivers! The keel is not as pronounced as on the longer touring kayaks, which makes the LAGUNA more agile. The weight of the carbon boat is approx. 18.5 kg. Therefore the handling of this lightweight kayak is very simple, loading on and off the car roof is no longer a problem.

**Seayak Junior**

The SEAYAK Junior has been perfectly adapted to suit the needs of children and teenagers. Thanks to its balanced riding qualities, it can keep up well with longer and larger boats, even over longer distances. Equipped with a watertight storage in the rear, a deckleash and steering mounting.
The PIAVE weighs only 22 respectively 24 kg and is therefore one of the lightest double-seaters on the market. This makes him the first choice for paddlers looking for a lightweight and easy to handle boat, easy to load on a higher car roof. The PIAVE offers a high directional stability as well as agility and flip-stability.

A perfect kayak for long tours across open waters.

The elegant YUKON K2 glides easily through the water and bring you safely to your destination. Large, watertight storage compartments offer ample space for your equipment. With a weight of 25 and 29 kg respectively, it’s one of the lightest boats of its class.

Open version of the K2 Sport. It’s identic in length, width and lower boat to the K2 Sport. Thanks to the big open cockpit it’s a perfect touring kayak for inland waters with only light swell.

A two-seater touring-kayak for open waters and coastal tours. The bow and stern of the POSEIDON possess pronounced keel lines, which ensure better tracking and a pleasant travelling speed. Of course the POSEIDON comes with a comfortable seat-system including our new 3D-thigh braces, suitable for longer distances.

The ideal two-seater for your tour on rivers and lakes. Due to the broad knickspant and lots of rocker the boat glides easily around narrow bends. A lot of storage space and a very high degree of safety due to its high overall volume. Our HTP material demonstrates its superiority by providing the EXCURSION EVO with a very stiff boat hull. This boat will go through thick and thin with you.
The Capri I possesses very good tracking qualities. A kayak for beginners and casual paddlers, made for calm rivers and lakes. Due to its slim shape, it fits perfect for smaller and lighter paddlers.

The large cockpits ensure an easy entry and exit. Our tour-seat in combination with the high backrest guarantees a comfortable sitting position.

Paddling-fun for the whole family!
The CL 470 RELAX is an open double-seater for families and rental stations. Its main characteristics are a very high stability and easy handling. An optional child's seat can be added fast and will transform the CL RELAX into an ideal family-kayak. Our tour-seat in combination with the high backrest guarantees a comfortable sitting position.

Paddling fun for beginners – Ideal for the rental!
The CL 430 is a very stable beginner kayak with an easy handling. The combination of a length of 430 cm and a moderate rocker enables the CL 430 for the sea, lakes and streams. The big cockpit offers an easy entry and exit. Our tour-seat with the new, high CustomLine-backrest guarantees a comfortable sitting position.

The pronounced keel lines provide good tracking, the large base gives the CL 370 a high level of stability and agility.
The large cockpit makes it easier to get in and out of the boat.

Our tour seat with the new high CustomLine back rest guarantees a comfortable sitting position.
A classic expedition and recreation canoe, combining a big load capacity with speed. Its length and moderate rocker invite you to relaxed tours on lakes and calm rivers. This canoe is fast, easy to maneuver and very stable. The HORTON 16 is made of the unique Armerlite-material. It is enormously stiff, robust and light. The complex sandwich construction offers additional buoyancy and stiffness.

Cockpit rim made of aluminum, equipped with valuable web seats incl. ash-frame. Made in Germany.

Armerlite is a thermo-composite material, consisting of weaved Glass and polypropylene-fibers. The layers are put exactly into the form and covered with a vacuum cover. During the warming the polypropylene melts around the Glassfibers and gets compacted non-porously under vacuum. After the cooling, the stiff, durable and light canoe-hull is finished. The honeycomb bottom panel offers excellent stiffness and additional buoyancy.

Advantages
- Stiff and light, offering the durability of a plastic-canoe
- Improved speed and acceleration
- Easier to carry
- 100% recyclable

Creekers are kayaks for heavy whitewater. Fundamental features are a high volume in bow and stern offering safety buffers. The tip doesn’t dip in waves, but comes out quite fast. Depending on the bottom, a creeker has either a non-problematic handling, or is demanding and more agile to paddle.

“I paddled this passage for the first time in a polyester boat – four meters long, with a back belt which was really only a belt. Was fun! Last year I paddled it with a Curve 2.5, you sit in there like infused, all of your movements are directly transferred to the kayak. In these moments I’m very happy about the evolutions of the last 30 years.”

Toni Prijon

A fast and agile creeker with an aggressive design and excellent resurfacing qualities! Made for heavy whitewater and extreme races. Optimized distribution of volume for a maximum of safety and control. The pronounced edges on the bottom and the long water-line make the boat fast, ensure the tracking qualities and enable you to paddle precisely. Equipped with our established PRO-fitting for a direct contact to the boat and full control.

XL-creeker for difficult and heavy whitewater. Extremely robust hull and PRO-fitting for a direct contact to the boat and full control. Made for paddlers, looking for safety by volume. The CALI impresses with a lot of safety buffer and a balanced handling. Safe and controlled resurfacing, fast changes in direction and fast acceleration offer paddling enjoyment.

A River runner has pronounced edges and reacts fast on hip movements. Therefore it’s not only fun for experts, but helps to learn a perfect technique. When making mistakes, a River runner gives prompt feedback and when used in moderate whitewater it makes fun due to its agile mode. The flat stern enables you to pivot or surf a wave.

The CURVE 3.0 is a fast and agile whitewater kayak with excellent boof and buoyancy qualities. Pronounced edges on the lower boat provide good tracking and precise riding qualities. Steep or heavy, narrow or open whitewater, the CURVE 3.0 is great fun on all terrains!

The perfect whitewater kayak for smaller and lighter paddlers! Thanks to its dynamics and agility you will immediately feel comfortable in the CURVE 2.5. Its light weight and the reduced measurements simplify its handling. The cockpit rim, which has been widened towards the back, improves the mobility of the paddler. The broad bent-up tip provides safety, its pronounced edges high initial stability and maximum agility.

We offer an attractive range of laminated paddles, consisting of our models BORINO, KORNATI and TARA. The new, slightly profiled paddle-blades with foam core are very stiff and light and distinguish themselves by a valuable optic. Available as Glass fiber-version in red, mango and green as well as premium carbon. These models divide up in different sizes and requirements:

**Borino**
Smaller paddlers and women will like the low weight and the easy guidance in the water as much as ambitious paddlers on longer tours. Thanks to its low weight and the slim blades, both an energy-saving technique and an endurance oriented paddling with a higher frequency is possible.

**Kornati**
Well-shaped, light touring paddle with a midsize blade. Distinguished by a good counter pressure and an optimum gliding behavior through the water. Works very well for longer tours on lakes and the coast.

**Tara**
Geared to the application as an all round paddle, also in easy whitewater. The big, radiuses blade works perfectly both with our new Enduro kayaks and for big and wide touring kayaks. Maximum propulsion and high pressure thanks to the big chamfered blade.

---

PaddLock
Offers a broad range for the paddler: from an exact fixation of the degree value to an infinitely variable fixation of the length in a range of 10cm. For the using by various paddlers, in various boats or wind conditions.

---

**Baja**
The large and rounded blades of the BAJA paddle are very well suited for touring. Due to the large blade size, the paddler can bring a lot of energy in the water. At a higher frequency, sporty paddlers can achieve best possible propulsion.

**Tara**

---

**Stream**
The STREAM consists of high-quality carbon or glass fibres, pressed into a mold under high pressure and at a high temperature. The profile in the paddle blade permits a construction without a middle core. The blades are very stiff and don’t flutter. Its stability can be compared to our high-quality white water blades. Due to its shape which is a bit flatter, the STREAM is also suited for sea kayaking. It glides easily through the water and is saves energy to the paddler.

---

**Bora**
The nicely shaped BORA paddle is an economical version of our profiled touring paddles. The blade consists of a dry impact resistance polyamide 6 with UV stabilizers, enriched with approx. 35% glass fibre, providing it with a high level of rigidity and very high impact resistance.

**RIM**

---

**Passat**
With a blade size reduced by approximately 25% and a smaller shaft diameter, compared to the BORA paddle, this paddle is especially suited for teenagers and small adults. The low weight and the small effort needed, make it possible to paddle also longer distances without tiring quickly. Our Passat paddles are unfortunately not available with PaddLock-system.

---

**RIM Bambino**
An allround paddle, which can be used both for white water and touring. Blade made of impact-resistant RIM material, shaft made of anodised aluminum.

---

**RIM Kombination**
Paddle for children and teenagers. Reduced blade size with a thinner shaft for a better hold for small hands.

---

**RIM SUNSHINE**
Godzilla Whitewater Paddle

Attractive whitewater paddle, especially strong, with foam core and peripheral DYNEL edge. The paddle blade is very stiff due to our new foam core technology. Thereby you can apply high pressure on the paddle. The felt forward propulsion is 20% higher. The built-in DYNEL edge is very impact-resistant and plays along with the bending movements of the blade. The higher volume of the paddle blade provides above-average flotation, similar to a wooden paddle. The GODZILLA is available with a straight glass shaft or with an ERGO shaft, made of carbon.

GODZILLA Carbon
GODZILLA-CARBON approx. 1020g Art.No. 352 000

Janus NEW

Well-designed and robust canoe paddle made of glass fiber, with an integrated DYNEL-hem for a high abrasion resistance.

Lengths: 140 cm, 145 cm, 150 cm, 155 cm, 160 cm.

JANUS Glass approx. 740 g Art.No. 351 000

Tow Line Multi

Rescue equipment for tourers and sea kayakers. Packed tightly, it is only a bit higher than the hip belt so that it fits well on the back between the life vest and the spraydeck and doesn’t hinder you from paddling. Packed loosely (bag folded out) additional pieces of equipment can be stored together with the rope. Equipment:
- rope length 10 meters with integrated impact-softener
- Kayaking carabiner with float
- Hip belt with quick fastener, reflective zone

Art.No. 80 178

Bilge Pump

Bilge pump to drain the kayak. Combined with the paddle float an essential for paddling in the sea.

Art.No. 90 123

Steering KI, KII and Junior Pro

Fully folding steering for PRIJON kayaks. With a profiled, flow-optimized steering blade, made of fibre-reinforced plastics. Almost all PRIJON kayaks can optionally be equipped with a foot steering. Tracking and agility can be positively influenced by use of the steering equipment.

Moto Mounting f. TORQUEEDO UL 403

Mounting kit for the high tech motor by Torqueedo, suitable for PRIJON touring kayaks. The motor is attached to the stern instead of the steering. The battery can be attached in the storage hatch or on deck. Steering is done via the foot pedals.

Includes:
- Mounting kit for the motor with retraction device, steering lines.
- Please refer to your specialized kayak dealer regarding price and technical details of the Ultralight 403 motor.

Art.No. 90 528

Paddlefloat

The paddle becomes a stabilizing outrigger, which facilitates re-entering the kayak. An essential companion when venturing into open waters. Our float can additionally be used as a flat packsack which can be stored under the deck net. For safety reasons you should carry a bilge pump in addition to the float.

Art.No. 80 180

Paddle leash

When the paddle gets lost, open waters can become very dangerous. Our sturdy paddle leash consisting of a 25 mm tubular strap with integrated rubber cord keeps your paddle safe to the boat. It is attached to the paddle with a belt loop with Velcro closure.

Spraydecks & Hatch covers

We offer spraydecks and cockpit covers in three different materials:

Neoprene
These spraydecks are made for continuous operation on rivers, lakes and the sea. Their most important characteristic is that they stick on the cockpit, even in choppy waters and when doing an Eskimo-roll.

FLEX
The advantages of the stretchable FLEX-Nylon material are its low weight and small pack size. These spraydecks have very good hold on the boat. Their mechanic resilience is lower than the one from Neoprene.

NYLON
Basic spraydecks for touring on domestic waterways, protecting against spray and rain. They’re a bit more favorably priced, but still hold well on the boat.

Pro Safe Whitewater

Functional white water spray deck with pre-formed plate. The PreSafe is easy to attach and due to its Latex lamination on its inside it remains firmly on the cockpit. Knee belt and grip sling as standard feature. A first class deck at a reasonable price. Want size: 72 cm, 79 cm, 86 cm, 93 cm.

Art.No. 73 900

Flex

Lightweight, high-quality spraydecks made of stretchy Nylon material with waterproof lamination. The big advantage of these decks is their perfect fit due to their neoprene-like stretchability, as well as their very light weight and small pack size.

Sizes and Art.No. see Table

Teller 86-92cm (Cockpit 2, 3): Kamin S/M: Art.No. 73 801
Teller 86-92cm (Cockpit 2, 3): Kamin L/XL: Art.No. 73 802

Teller 90-96cm (Cockpit 2, 4): Kamin L/XL: Art.No. 73 804

Touring Special

High quality touring and sea kayak spraydeck. Very stretchable plate with abrasion-resistant area at the front, knee belt and grip sling. Latex coat on the inside, offers excellent hold, even on wet cockpit rims. Chimney made of breathable 3-layer-laminate for the most comfortable fit. Width of hem can be individually adjusted. Shoulder straps can be taken off.

Art.No. 73 730

Touring Basic

Made for tourers, easy white water and kayak rentals. Due to its extremely stretchable plate, the deck fits cockpits from 86 to 96cm. Chimney made of breathable 3-layer laminate for best possible comfort. The very stretchable neoprene rim at the top provides safe hold on the body.

Sizes and Article numbers

Hatch cover Neoprene

To cover the cockpit during storing or transporting your kayak on the car roof, to keep dirt and vermins out. Safe hold on the cockpit without flapping. Reduces airstream noises and saves fuel.

Offers you the possibility to transport your gear and to keep the inside of your boat dry while traveling.

Ready in different sizes. Made of PVC-laminated material.

Art.No. see Table

Sizes and Article numbers

Hatch cover Nylon

Nylon spraydeck at a favorable price with mesh pocket at the front, grip sling and shoulder straps. Cockpit size and hem adjustable with elastic band.

Art.No. see Table

Sizes and Article numbers

Hatch cover Flex

Stretches similar to neoprene, can be stored even easier, thanks to its low weight and the small pack size.

Sizes and Article numbers
Superlight Neoprene

Superlight Neoprene is made for competitive sport, summer paddling and for wearing under paddling jackets. Upper lamination 100% Superstretch Nylon.

The thermo-reflective lamination is pleasant to the skin, offers perfect ability to move and protects the body from cooling down.

**Pullover SUPERLIGHT**

Long-sleeved top.  S - XXL  Art.No. 41 550

**Neoprene shoes HIGH**

High-cut paddling bootie made of elastic neoprene with vulcanized sole. Perfect in narrow boats, as the shoes do not take up a lot of space.

Size 35/36 - 45/46  Art.No. 42 300

**Cap SUPERLIGHT**

Very thin cap. Keeps warm and fits under the helmet.

Art.No. 40 700

**Gloves**

The paws are attached to the paddle shaft with Velcro. Hands are protected from wind and cold. One size fits all, made of 4 mm neoprene.

Art.No. 40 840

**Superlight Neoprene**

Superlight Neoprene is made for competitive sport, summer paddling and for wearing under paddling jackets. Upper lamination 100% Superstretch Nylon.

The thermo-reflective lamination is pleasant to the skin, offers perfect ability to move and protects the body from cooling down.

**T-Shirt SUPERLIGHT**

Short-sleeved top.  S - XXL  Art.No. 41 350

**Neoprene shoe LOW**

Low-cut paddling bootie made of elastic neoprene with vulcanized sole. Perfect in narrow boats, as the shoes do not take up a lot of space.

Size 35/36 - 45/46  Art.No. 42 400

**Shorty SUPERLIGHT**

Short Neoprene pant, cut to fit when sitting.  S - XXL  Art.No. 41 450

**Neoprene socks**

No longer cold feet when paddling thanks to our neoprene socks. Neoprene keeps even wet feet pleasantly warm. Laminated on both sides.

Size 36/35 - 46/47  Art.No. 40 600

Cap SUPERLIGHT

Very thin cap. Keeps warm and fits under the helmet.

Art.No. 40 700

**Paddling paws**

The paws are attached to the paddle shaft with Velcro. Hands are protected from wind and cold. One size fits all, made of 4 mm neoprene.

Art.No. 40 840

**Gloves**

Gloves made of neoprene with non-slip texture on the inside and across the finger tips. Pre-bent fingers. Velcro strap at the wrist.

Art.No. 40 830

**Neoprene shoes HIGH**

High-cut paddling bootie made of elastic neoprene with vulcanized sole. Perfect in narrow boats, as the shoes do not take up a lot of space.

Size 35/36 - 45/46  Art.No. 42 300

**Neoprene shoes LOW**

Low-cut paddling bootie made of elastic neoprene with vulcanized sole. Perfect in narrow boats, as the shoes do not take up a lot of space.

Size 35/36 - 45/46  Art.No. 42 400

**Junior Long John**

Long-sleeved shirt made of thin Neoprene. Very stretchy and pleasant to wear.

Size 1 - 3  Art.No. 41 360

**Junior Neoprene shirt**

Short Neoprene pants cut to fit when sitting. 3-mm-Neoprene, laminated on both sides.

Größe 1 - 3  Art.No. 43 210

**Ocean floating Sunglasses**

Consisted designs and a unique Floating technology make these polarized glasses to a must-have for every paddler! Five different models with hydrophobic, polarized lenses and frames made of Grilamid TR 90 or Polycarbonate are available. Floaters air chambers will prevent them from sinking. The perfect accessory for paddlers, as they provide superior buoyancy when lost from the head. Non-slip ear socks and comfortable nose pads guarantee the best-possible hold.

**Kayak Smurf**

Exclusively at Prijon!

**Gray life jacket**

Front zipper, chest and tummy belt for perfect fit, crotch strap to prevent slipping out, unconsciousness-safe collar, signal whistle, large reflectors.

Size 1: 15-20 kg
Size 2: 20-30 kg
Size 3: 25-40 kg

Art.No. 80 040

**Hoodie Universal**

The hood can be used independently from the jacket. Diverse adjustment possibilities. The face is protected best from the elements.

Art.No. 46 980

Art.No. 44 025

Deck bag watertight

Deck bag, made of sturdy Nylon material with welded seams, can be mounted in front of or behind the cockpit rim. Roll-top closure with safety belt, handle and loops for attachment.

Art.No. 44 020

Hatch bag

A combination of a watertight clothes bag and hatch cover. Roll-top closure with triple safety buckles. Universal size for cockpits starting at 86cm. Straps, which are fastened around the boat, for strong hold. Handles facilitate the handling of the boat with attached bag. Shoulder strap detachable. Material: Nylon, taped seams.

Paddle bag

NEW

Hatch bag
The frames of the STEEL-series are made of stainless steel and therefore completely corrosion-free. Thanks to the new stick-technique with springs made of stainless steel the construction forgoes loose parts. The PU-foam-wheels reduce the overall weight and cannot lose air.

Small pack size in dismantled state!

Day Tourer S
Material: Stainless steel
Capacity: approx. 90 kg
Wheel size: 19,5 x 4,5 cm
Weight: approx. 1,8 kg
Art.No. 90 191

Day Tourer L
Material: Stainless steel
Capacity: approx. 100 kg
Wheel size: 27 x 6 cm
Weight: approx. 2,0 kg
Art.No. 90 187

Steel S & L
Material: Stainless steel
Capacity: approx. 100 kg
Wheel size: 19,5 x 4,5 cm
Weight: approx. 1,8 kg
Art.No. 90 192

Steel L
Material: Stainless steel
Capacity: approx. 100 kg
Wheel size: 27 x 6 cm
Weight: approx. 2,5 kg
Art.No. 90 197

Day Tourer S
The Day Tourer S boat cart is equipped with a strong elastic round-rubber and can be attached to the kayak within seconds. Perfect for a short transport from the car to the water or a short portage!

Very small pack size. The base frame of the Day Tourer L is widened a little bit, to enable it for a more centric position below the kayak.

Furthermore the Day Tourer L is equipped with larger wheels for a smooth rolling. The easy function principle is the same at both sizes.

The new load assist sits behind the bar and is therefore much more aerodynamic. As it is mounted below the bar, it can be used from both sides. That way, depending on the width of the car, up to six kayaks can be loaded with this assist. Available in different lengths to be adapted on the respective base support.

Transport

The PRIJON Transport programm
In our program you find a wide range of tools, helping you transporting and handling your kayak. It starts with the loading on the car roof. You need a base support, officially approved for your car. These base supports are available at car dealers.

We offer you kayak-specific accessories which you will find on the following pages.

All our products of the transport-program are “Made in Germany”.

Load assist for bars with bottom slot

The most important advantages: You never have to carry the whole weight of the boat. There is no more difficult balancing to do. Even smaller persons can now easily load the boat onto the car roof.

The Day Tourer S boat cart is equipped with a strong elastic round-rubber and can be attached to the kayak within seconds. Perfect for a short transport from the car to the water or a short portage!

Very small pack size. The base frame of the Day Tourer L is widened a little bit, to enable it for a more centric position below the kayak.

Furthermore the Day Tourer L is equipped with larger wheels for a smooth rolling. The easy function principle is the same at both sizes.

The Prijon Boat carts

For transporting your kayak from the car to the water and back and in case of walking passages during tours, we offer you a large assortment of boat carts. The choice for the right cart depends on the type of the kayak and the requirements to the pack size. Smaller and lighter carts are easier to store in the kayak, larger carts with bigger wheels roll better in rough terrains and don’t cave in that easily.

The Day Tourer S boat cart is equipped with a strong elastic round-rubber and can be attached to the kayak within seconds. Perfect for a short transport from the car to the water or a short portage!

Day Tourer S
Material: Stainless steel
Capacity: approx. 90 kg
Wheel size: 19,5 x 4,5 cm
Weight: approx. 1,8 kg
Art.No. 90 191

Day Tourer L
Material: Stainless steel
Capacity: approx. 100 kg
Wheel size: 27 x 6 cm
Weight: approx. 2,0 kg
Art.No. 90 187

Steel S & L
Material: Stainless steel
Capacity: approx. 100 kg
Wheel size: 19,5 x 4,5 cm
Weight: approx. 1,8 kg
Art.No. 90 192

Steel L
Material: Stainless steel
Capacity: approx. 100 kg
Wheel size: 27 x 6 cm
Weight: approx. 2,5 kg
Art.No. 90 197

Crossover

Thanks to its round support it fits for all hulls, from a sea kayak to a canoe. Fully dismountable, with big wheels. Fits in small storage spaces, inkl. lashing straps.

Material: Aluminium
Capacity: approx. 120 kg
Weight: approx. 3,0 kg
Art.No. 90 186

Crossover Light

Very light, broad wheels keep the weight of the boat cart just below 2 kg. The wheels are foamed, so there is no tiresome pumping or loss of air.

Material: Aluminium
Capacity: approx. 120 kg
Weight: approx. 2,0 kg
Art.No. 90 190

Boat cart with support

Freestanding boat cart with big wheels and a lot of ground clearance. Frame made of stainless steel, including lashing straps. This cart is constructed without a central axis and can therefore easily be thread into the storage hatch.

Material: Stainless steel
Capacity: approx. 110 kg
Weight: approx. 2,8 kg
Art.No. 90 193
Transport

Roof racks enable you to transport several boats on your roof rack, as the boats are transported upright side by side. The foldable version can remain on the roof of the car, even at low vertical clearances, e.g. at the garage door.

J-Bars protect your kayak best during transporting, as the support reaches around the boat hull. The canoe-¼-bars are made for open canoes and big double seaters. To facilitate loading heavy boats on the roof we offer you our highly resilient load assist. With this tool a single person is able to load heavy boats on the car roof with little effort.

Depending on the distance between the bars and the length of the kayak we recommend an additional tied-down fixation of bow and stern. Please consider the legal requirements regarding roof load, permitted lengths and labeling when transporting your kayak on the car roof. All PRIJON-roof racks are „MADE IN GERMANY“.

Roof racks for square bars

Roof racks for mounting on standard square bars, made of high quality steel, corrosion-free galvanized.

14 Bar
- Galvanized steel, for the transport of canoes or large kayaks. Set of 4.
  Art.No. 90 221

Vertical Support bar
- Galvanized steel. Ideal solution, if you want to transport several boats on your car roof. Belts can be strapped down on both sides. Set of 2.
  Art.No. 90 219

J-Bar
- Galvanized steel. For 2 paddles per boat. Paddles don’t require an extra strap. Set of 2.
  Art.No. 90 210

3-Bar w. paddle holder
- Galvanized steel. Limits the risk of material damage to your kayak. Set of 2.
  Art.No. 90 215

Roof racks for bars with groove

Support elements for the attachment on tubes with groove, like e.g. Thule Alu, Zölzer or various profiles by car manufacturers. Mainly made of stainless steel.

14 Bar
- Stainless steel. For the transport of canoes or large kayaks. Set of 4.
  Art.No. 90 217

Vertical support foldable
- Stainless steel. Very sturdy. The support bars can be folded down when not used, the vehicle fits into the garage without having to take down the roof rack. Set of 2.
  Art.No. 90 235

J-Bar
  Art.No. 90 216

Foam padding
- Foam padding for square tubes. Prevents the kayak from slipping. Set of 2.
  Art.No. 90 236

Tie down straps

Made of Polypropylene with self-clamping metal buckle. Certified according to EN 121 95-2.

- 3.5 m  Art.No. 90 240
- 5.0 m  Art.No. 90 250

Python MASTERLOCK

Made in USA. Very sturdy anti-theft device for kayaks, bikes and other sporting equipment. The steel cable can be tightened after locking.

- Set lock and steel cable 1.8 m  Art.No. 90 171
- Set lock and steel cable 4.5 m  Art.No. 90 172
- Steel cable 9.1 m  Art.No. 90 176

Adapter small

Adapter for attaching our square roof rack equipment on tubes with groove. Set of 2.
  Art.No. 90 226
**Repair sets**

**Polyester**  Art.No. 00 012  
**Epoxy**  Art.No. 00 011

- **Polyester**  Art.No. 90 080  
- **Epoxy**  Art.No. 00 011

- **Polyester**  Art.No. 90 080  
- **Epoxy**  Art.No. 00 011

**Repair sticks**  
For repairs of minor damages on HTP hulls.  
Available in different colours.

- Art.No. 90 031  

**Abrasion Protector**  
For the stern of Cruiser 430/CL 430 in case of frequent ground contact, for example in the rental.  
Art.No. 90 031

**Marine Goop**  
For gluing of foam separations and other sealing jobs on HTP kayaks.  
Art.No. 00 017

**Glue for protecting caps**  
For the mounting of protecting caps.  
Also for stern mountings.  
Art.No. 90 096

**Xerapol**  
Polish paste  
For surface care and removal of minor scratches on PriLite kayaks.

- Art.No. 90 184

**Comfort Backrest**  
The included lumbar support can be adjusted via the backrest. Seat made of sturdy Nylon material with included foam padding, back rest cushioned with preformed foam wedge. Suitable for many different types of seat.  
Art.No. 90 134

**Vaco Seat cushion**  
This seat cushion for the PRIJON tour seat is a great help for paddlers who have problems sitting in the boat for a longer time. The cushion is filled with plastic beads and can be adjusted with a vacuum pump, the cushion then fits perfectly, because it takes the individual seat shape of the paddler.  
Get in – pump – feel comfortable!  
Art.No. 90 169

**Seat- or Backrest**  
To upgrade your PRIJON touring seat.  
Art.No. 100 000 42  
Lehnenpolster  Art.No. 100 000 41

**Canoe seat Comfort**  
Padded canoe seat for additional installation, incl. straps for attachment.  
Upper material 100 % Nylon.  
Art.No. 90 162

**Seat cushion Junior**  
Suitable for the SEAYAK Junior. Comes with attachment material.  
Art.No. 90 184

**Thigh pads Active**  
Preformed thigh pads with screws. To equip boats without thigh pads. Set with spacers and screws.  
Art.No. 90 173

**Transport and storage**

PRIJON HTP – boat hulls are very sturdy and hard-wearing. The material used has already received its permanent protection against UV rays. Normal ground impact occurring when touring cannot harm the hull. Transport with standard roof racks is easy. Slight deformations caused by the cargo straps will go back to the normal shape within minutes after unloading the kayak. When transporting longer boats over longer distances, we recommend you to additionally secure the ends of the boat with straps.

If the boat is permanently stored outside, the boat hull should be covered, in order to prevent premature fading of the colour. Temperatures of -40° C to +60° are no problem at all. Even under such extreme conditions, HTP will keep its flexibility and sturdiness. It is not necessary to treat it with varnishes, wax or other polishing substances. These would become apparent on the surface and cause unattractive discolourations. For cleaning, just use warm water with a dash of washing-up liquid.
Seakayak trips

Our guided seakayak tours are very popular among paddlers for years. The Dalmatian coast is one of the most beautiful paddling territories in the world, thanks to its clear water and rocky coastline. Enjoy a memorable week of beautiful day tours with our experienced guide. Choose between our Croatian bases Prvić (near Šibenik) and Risanka on the main island of Kornati in Kornati National Park. For our base in Risanka we are additionally offering the tour starting from Sali on the island of Dugi Otok.

Prvić Island: The island of Prvić is located about 15 kilometres south of the Kornati archipelago and approximately 3 kilometres from the mainland. It is one of the islands of the Šibenik archipelago which are closest to the mainland.

Kornati Island: Our base is in Risanka, on Kornati main island, in the middle of the Kornati National Park. From here we can easily start kayak tours and a holiday cottage is at our disposal in Šibinare bay.

For further information please go to our website www.prijon.com. If you have questions, feel free to contact us by phone at: +49 8031 / 3037-0 or by email at: seakajak@prijon.com.

You would just like to hire our equipment locally?
On Prvić Island it is possible to rent our sea kayaks plus spray deck and paddle. Please call us or make a reservation on our website.

Info and bookings at www.prijon.com

The Expert Dealer

You will get your kayak via a large network of dealers all over the world. Our expert dealers have long-term experience and can advise you in a competent and purpose-oriented manner. The close proximity to production makes it easy to deal with special requests, if technically feasible. Our dealer will be happy to advise you.

Here’s where you will also have the opportunity to test your desired boat in advance, so that you can make the best choice. At many dealer events and expos we are present ourselves, together with our experts, in order to present our products to you. You can find currently updated info on our network of dealers as well as events on our website www.prijon.com

Our Service

We are happy to fulfill special requests, if they are technically feasible, and will build your individual kayak for you. In the event of problems, we will try and find a fast solution together with your dealer. “We are within easy reach!” We can supply you with spare parts for many years. Our warehouse is at your disposal.

Our Service

Prijon
Kayak school
Soča
In our Prijon Kayak School on the Soča beginners are just as welcome as advanced paddlers, who wish to build up and extend their knowledge. Take advantage of our long year experience and combine your course with a fantastic holiday in idyllic Slovenia! Best equipment and competent instructors guaranteed. For further information refer to Igor Mlekuz, head of our Prijon Sport Center.

Web: www.kajakschule-prijon.com
The fibre mats of our GRP-kayaks mainly consist of glass fibres, which are very stiff, but still reasonably priced. Kayaks made of GRP are comparable to the PriLite boats with regard to their weight.

Laminated kayaks are made by hand in the traditional way. They are more sensitive to contact with the ground compared to boats made of HTP or PriLite, and should therefore be predominantly used in free-flowing waters. PRIJON is offering the two material varieties of GRP and Carbon/Aramid.

**CARBON-ARAMIDE**

These boats mainly consist of carbon and Aramide fibres, combining the excellent qualities of carbon, which is very hard and gives the boat its stiffness with the qualities of Aramide, which is very shock-proof and provides the necessary impact resistance of the kayak. The biggest advantage of this construction method is clearly the incredibly low weight (up to 10kg lighter than HTP-boats).

- The lightest boat, 25% less weight than a HTP-kayak
- Elegant shape
- More susceptible to mechanical wear and tear than HTP and PriLite

**GRP**

The fibre mats of our GRP-kayaks mainly consist of glass fibres, which are very stiff, but still reasonably priced. Kayaks made of GRP are comparable to the PriLite boats with regard to their weight.

- 20% reduction of weight compared to a comparable HTP-kayak
- Elegant shape
- Simple handling outside the water
- More susceptible to mechanical wear and tear than HTP and PriLite

**Material**

**HTP - Hightech-Thermoplast**

For the production of its world-famous HTP-kayaks, PRIJON is using a special PE, called HTP. This material can only be used in blow-moulding and not in roto-moulding, as used by other producers of kayaks. The molecule chains of HTP are approximately 10 times longer than those of rotated PE. This makes the boat hulls stiffer, lighter and less susceptible to abrasion. HTP-kayaks have clear advantages regarding form stability, abrasion and boat weight, compared to kayaks made of rotated PE. HTP is very environmentally friendly. When it is recycled, there are no poisonous gases or residues; it is ground water neutral and free of heavy metals. Care: HTP-boat shells are very sturdy and already possess a permanent protection against UV-rays. Therefore they need no treatment with varnishes, wax or other care materials.

- Extremely high mechanical durability
- Not sensitive to ground impact
- Stiff and form-stable during paddle tours in the Arctic and the Tropics
- Comparably high weight

**PriLite**

For PriLite boats, the ABS-combination plates, sealed with UV-resistant perspex, are pulled into the hot moulds, which have a temperature of approximately 80 degrees, in a computerized process, using heat and vacuum. The upper and lower parts of the boat are inseparably joined together by a double-sided U-profile. This profile additionally strengthens the sides of the kayak against impact. The mounting of deck mountings and interior fittings are thoroughly done by hand, as on all Prijon boats. Advantages: PriLite boats are approx. 20% lighter than comparable kayaks made of HTP. At the same time there is a clear advantage regarding stability compared to GRP or CarbonAramid.

Reparis/Care: Superficial scratches can be polished off with a special paste, available in specialized shops. Larger repairs are made with Eposi. The inside of the boat should not be permanently exposed to sun (store upside down!).

- Lighter than HTP
- More sturdy than GRP/Carbon Aramide
- More susceptible to mechanical wear and tear than HTP

**Laminated kayaks**

Laminated kayaks are made by hand in the traditional way. They are more sensitive to contact with the ground compared to boats made of HTP or PriLite, and should therefore be predominantly used in free-flowing waters. PRIJON is offering the two material varieties of GRP and Carbon/Aramid.
